QUALITY ASSURANCE

SUBMITTALS

EXTRA STOCK

DELIVERY, STORAGE AND HANDLING

JOB CONDITIONS

Work shall not commence until after painting is completed.

B. PRODUCTS

MANUFACTURERS

Resilient Base:

- ## MATERIALS

C. EXECUTION

INSPECTION AND PREPARATION

112-006

1 Surfaces shall be free of grease, oil, paint, and foreign matter. Dust shall be removed by vacuum cleaning after a
2 light sanding with a power disk floor machine with a course emery pad.

3
4 Under this Section, the Contractor shall be responsible for installing fill in depressions, holes, cracks, and minor
5 variations up to and including 1/16" vertical offsets.

6
7 Surfaces to receive resilient flooring shall be thoroughly clean and dry. The installation of resilient flooring shall be
8 an indication of the Contractor's acceptance of the substrates, and he will automatically assume the responsibility
9 for any unacceptable finished work caused by substrate conditions.

10 11 INSTALLATION OF VINYL BASE

12
13 Install vinyl base where scheduled, upon completion of the application of wall finishes and all flooring materials.

14
15 Vinyl base shall be installed in continuous lengths. Piecing will not be permitted. Miter internal corners. At
16 external corners, 'V' cut back of base strip to 2/3 of its thickness, heat and fold: no joints allowed within 2'-0" of
17 corners. All vinyl base shall be secured to vertical surfaces with adhesive utilizing methods and materials
18 recommended by the manufacturer. Exercise extreme care to avoid getting adhesive on exposed wall or floor
19 surfaces. Heat vinyl base material and/or use contact cement at corners where the return distance is not sufficient
20 for secure and permanent anchorage. Roll with a hand roller to assure full adherence to the wall surfaces.

21 22 CLEANING AND PROTECTION

23
24 Resilient base shall be cleaned thoroughly in accordance with the manufacturer's written maintenance
25 recommendations.
